www.spacemakerwardrobes.com.au

Step 1: Fix the bottom track in place

Place the bottom track in place (as shown in the above images). Fix the bottom track in place with screws or liquid nails. If using screws, pre-drill 3 holes along the track and then fix the track in place.

Step 2: Put star caps on screws

Place the star caps on the screws. Using a hammer, lightly tap on the star caps so that they are fixed in place.

Step 3: Fix the top track in place

Pre-drill 3 holes along the top track (as shown above) - one in the middle, and one on either end (approx 300mm in from each end). Hold the top track and fix it in place.

Step 4: Adjust the door guides

As shown above, adjust the door guides by bending them out slightly. This helps to ensure that the doors run smoothly along the top tracks.

Step 5: Insert the doors

1. Lift door into the top track

2. Sit the door in place onto bottom track

Lean the doors forward and lift the door so that the top of the door slides into the top track. Once the top of the door is in place, sit the bottom of the door onto the bottom track. The wheels should sit in the v-groove.

Step 6: Adjust the doors

Above each wheel is a screw which allows the doors to be adjusted (up and down). Use a screw gun or screwdriver to adjust the doors so that the edge of each door is flush with the door jambs.

Step 7: Insert the buffer strip

Insert the supplied buffer strip into the edges of the doors. This ensures a soft close and protects both the doors and the door jambs.

Congratulations! You have finished installing your sliding wardrobe doors. Please don't hesitate to contact us if you have any problems or questions.
